Dear Sir/Mam,

I am writing to apply for the **Software Engineer Intern** position at your company. I am currently studying Computer Engineering at LJ University and will graduate in June 2025. I am excited about the opportunity to contribute to your team.

I have completed **two internships**. In my first 5-month internship as a PHP intern, I learned phpMyAdmin, MySQL, Bootstrap, and jQuery. I created a wizard form, E-Receipt feature, user authentication, and designed web pages. In my second internship as a React Frontend intern, I built a website for physically disabled people, learned responsive web design, React Hooks, and started learning Java for the backend.

In my studies, I have gained experience with HTML, CSS, JavaScript, Java, C, Python, jQuery, PHP, and frameworks like Bootstrap, Node.js, Express.js, React.js, and Django. I am also proficient with MySQL and MongoDB. I have solved **130+ problems on LeetCode** and completed projects like a YouTube clone, portfolio website, Todo list app using the MERN stack, JWT authentication, and a Banking Management System in Java and Many other Projects.

I am impressed by your company's work culture and growth, and I believe my background makes me a good fit for your team. I enjoy learning new things, meeting new people, and approaching challenges creatively.

Thank you for considering my application. I look forward to discussing how I can contribute to your team.

Sincerely,

Kushal Khandhara
